Composition Roof Shingles

Due to the increasing number of complaints from homeowners regarding wind related damage of roof coverings and as a result of careful review by Clark County Community Development Building Division, the City of Vancouver and the Clark County Homebuilders Association, we will be implementing a new policy. Under the provisions of Chapter I of the 1997 Uniform Building Code, effective January 15, 2001, Clark County will require that all new and replacement composition roof shingle installations must be a minimum 25-year life shingle manufactured to ASTM 3462 and installed per the manufacturer's installation specifications.
